

Wireless Sensor Key Card Switch [M3-KC1]

BASIC OPERATION

When the room key card [standard credit card size 2.125" x 3"] is inserted into the slot in the wall mounted switch, a wireless signal is sent over the Venergy wireless network giving the guest full control of the selected Venergy devices in their room. When the card is removed, all lights and HVAC controls return to their preset unoccupied mode.

Energy Harvesting

Switch generates the power for wireless signal itself when the key card is inserted/removed, therefore there is no connecting wire, no battery, and no standby loss.

Customize control settings

Control a variety of Venergy devices with the M3-KC1 switch:

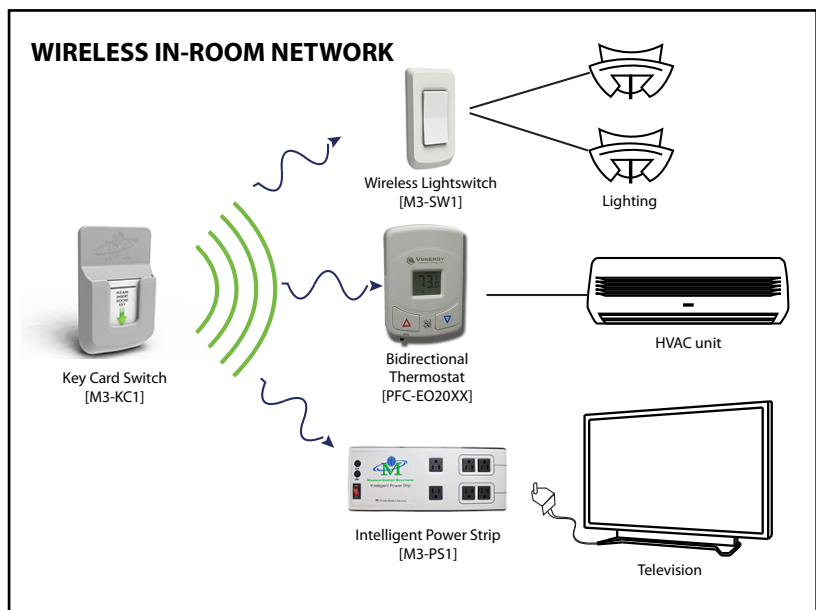

- Bidirectional Intelligent Thermostat
- Intelligent Power Strip (control television, stereo, etc.)
- All or selected lights
- More!

Easy to use

- Installs in minutes
- Easy to configure
- Requires no wiring or batteries
- Responds to all standard-size key cards

DIMENSIONS (approximate)

- Width: 2 $\frac{3}{8}$ "
- Height: 4"
- Thickness: $\frac{3}{4}$ "
